

A.G. Wassenaar **Inc.**

INDUSTRIAL HYGIENE/OCCUPATIONAL HEALTH SERVICES

The field of industrial hygiene covers a broad range of topics, and can be applied in both the residential and commercial setting. Industrial hygienists are scientists and engineers committed to protecting the health and safety of people in the workplace and the community. Industrial hygiene is considered a “science,” but it is also an art that involves judgment, creativity and human interaction. The goal of the industrial hygienist is to keep workers, their families, and the community healthy and safe. They play a vital part in ensuring that federal, state, and local laws and regulations are followed in the work environment, and assist private community members with recommendations for the protection of their personal health and safety.

A.G. Wassenaar, Inc. (AGW) has a team of Industrial Hygienists, with their experience level ranging from that of a Technician to a Certified Industrial Hygienist.
