## **SPILL PREVENTION, CONTROL, AND COUNTERMEASURE PLANS (SPCC)**

Federal regulation 40 CFR Part 112 in most cases requires that above ground storage tank (AST) facilities with an aggregate storage capacity of 1,320 gallons or more of oil implement a Spill Prevention, Control, and Countermeasure Plan (SPCC).

Due to recent changes in U.S. Environmental Protection Agency (EPA) regulations and the looming deadlines, AGW's SPCC services may be especially important to your company. According to the EPA, effective August 17, 2004, SPCC plans for older ASTs must be modified to comply with the new requirements. In addition, owners of both older and newer ASTs must implement an appropriate SPCC plan by February 18, 2005. AGW has the experience to help you meet these deadlines.

A licensed Professional Engineer will review and certify each site-specific plan.
