STORAGE TANK MANAGEMENT SERVICES

Complex state and federal regulations associated with your aboveground storage tanks (ASTs) and underground storage tanks (USTs) make compliance time consuming and confusing.

AGW offers a broad range of tank management services to help simplify the paper work and reduce your liabilities.

Our Services Include:

Preparing spill prevention control and countermeasure (SPCC) plans. Coordinating design, installation, inspection and management of cathodic protection (CP) systems.

Compliance audits to evaluate proper tank registration, release detection, and spill coordination.

Coordinating installation, replacement, or removal of USTs and ASTs.

Site assessments during tank removal.

Spill reporting.

Site safety audits.

Environmental investigation and remediation.

Participation in state investigation/remediation.

Reimbursement programs for eligible sites.

If a tank needs to be removed or replaced, AGW offers professional closure assessment services, contractor coordination, regulatory coordination and permit services, and health and safety monitoring.

AGW can also assist in compliance with cathodic protection, spill prevention, release detection, reporting, and other requirements.

Should a product release ever occur at your tank site, AGW has an experienced team of engineers, geologists, and scientists to investigate and design a cost effective cleanup plan. It's also good to know that AGW's professional staff have successfully helped Clients receive several million dollars worth of reimbursement through state funding programs, for eligible UST sites.
